

No Child Left Behind

Title II, Part D - Enhancing Education Through Technology (EETT)

How Achieve3000 Supports EETT Requirements

KidBiz3000® (grades 2-5) and **TeenBiz3000**® (grades 6-12), **Achieve3000's** Web-based literacy solutions, are built on decades of scientific research on how children learn to read. We provide differentiated learning solutions that improve reading, writing, technology skills, and interdisciplinary learning. **Achieve3000** can assist your district in utilizing EETT funds to meet the following requirements of NCLB:

1. Improve student achievement through the use of technology in elementary and secondary schools.

Achieve3000 is the leader in Web-based differentiated instruction. Our technology-driven and proven-effective literacy solutions, **KidBiz3000** and **TeenBiz3000**, along with our differentiated professional development, increase reading comprehension, fluency, vocabulary, and writing proficiency for students in grades 2-12. These solutions are based on decades of scientific research and are dramatically impacting high-stakes test scores for students across the nation. Our efficacy research shows that after 40 sessions (at least twice a week for 30-40 minutes) students who use **KidBiz3000** and **TeenBiz3000** show the performance gains they will need to achieve.

2. Assist students in becoming technologically literate by the end of 8th grade.

Achieve3000's Web-based solutions utilize technology to support your district's core curriculum including reading, writing, social studies, science, and ELL programs. The same content, along with cross-curricular extensions, is delivered to students at their individual learning

level, differentiated to their appropriate reading skill. This allows collaborative or independent learning and ensures individual student success.

Achieve3000 Solutions include embedded technology applications that can be used daily by students, teachers, and parents to communicate, receive and manage assignments, collaborate and share ideas, and work both inside and outside of the classroom.

3. Provide high quality professional development that uses research-based instructional strategies to effectively integrate technology into classroom instruction.

Achieve3000's Professional Development Series provides coursework in making use of research-based reading and writing strategies, enabling teachers to learn to promote fluency through deep understanding of content-area material. An overview of the importance of cross-curricular literacy is presented, along with an in-depth review of the thousands of assignments that are provided to teachers as part of **Achieve3000's** Web-based solutions.

Achieve3000 provides a high number of hours of professional development and coaching sessions nationally each school year. Our professional development team consists of highly experienced educators with expertise in the use of differentiated instruction curricula and classroom strategies. Curriculum area experts from **Achieve3000** are assigned to a district, school, teacher, or project on an individual basis, ensuring that the skills of the experts match your needs, and that content is customized to meet the needs of your district.

If your school or district is interested in submitting a grant application and would like a FULL ALIGNMENT TO YOUR TECHNOLOGY PLAN, please contact us to obtain more information:
